Common Types of Jiambalvo Managerial Accounting Exercises

Understanding the typical formats of Jiambalvo exercises can streamline your approach to solving them. These exercises generally fall into the following categories:

1. Cost Behavior and Cost-Volume-Profit (CVP) Analysis

- Determining fixed and variable costs

- Calculating contribution margin
- Analyzing breakeven points
- Margin of safety calculations

2. Budgeting and Forecasting

- Preparing operating budgets
- Developing cash budgets

- Activity-based costing (ABC)

4. Performance Evaluation

- Variance analysis for materials, labor, and overhead
- Responsibility accounting

Sample Problem and Step-by-Step Solution

To illustrate how to approach Jiambalvo exercises, consider this example:

Problem Statement:

A manufacturing company produces 10,000 units monthly. The following costs are incurred:

- Variable manufacturing cost per unit: \$15
- Fixed manufacturing overhead: \$50,000 per month
- Selling and administrative expenses: \$20,000 fixed + \$5 per unit variable

Calculate the breakeven point in units and dollars.

Step 1: Identify Fixed and Variable Costs

- Variable manufacturing cost per unit: \$15
- Fixed manufacturing overhead: \$50,000
- Fixed selling and administrative expenses: \$20,000
- Variable selling and administrative expenses per unit: \$5

Step 2: Determine Contribution Margin per Unit

Contribution margin per unit = Selling price per unit - Variable costs

Note: The problem does not specify the selling price. For this example, assume the selling price per unit is \$50.

Calculate variable costs per unit:

- Manufacturing: \$15
- Selling & admin: \$5

Total variable cost per unit = \$20

Contribution margin per unit = \$50 - \$20 = \$30

Step 3: Calculate Breakeven in Units

Breakeven point in units = Fixed costs / Contribution margin per unit

Total fixed costs = Fixed manufacturing overhead + Fixed selling & admin expenses = \$50,000 + \$20,000 = \$70,000

Breakeven units = \$70,000 / \$30 = 2,333 units

Step 4: Calculate Breakeven in Dollars

Breakeven sales in dollars = Breakeven units × Selling price

= 2,333 units × \$50 = \$116,650

Additional Exercise Solutions

Below are solutions to other common Jiambalvo exercises, covering various topics:

1. Cost-Volume-Profit (CVP) Analysis

Problem:

A company has fixed costs of \$100,000. The contribution margin ratio is 40%. Determine the sales volume needed to achieve a target profit of \$20,000.

Solution:

- Required sales in dollars = (Fixed costs + Target profit) / Contribution margin ratio
- Required sales = (\$100,000 + \$20,000) / 0.4 = \$120,000 / 0.4 = \$300,000

Answer:

The company needs sales of \$300,000 to achieve a \$20,000 profit.

2. Budget Variance Analysis

Problem:

Actual direct labor cost was \$25,000 for 1,000 hours. The standard rate is \$24 per hour for a standard of 1,200 hours. Calculate the labor rate and efficiency variances.

Solution:

- Actual rate per hour = \$25,000 / 1,000 hours = \$25/hour
- Standard cost for actual hours = 1,000 hours × \$24 = \$24,000

Labor Rate Variance:

= (Actual rate - Standard rate) × Actual hours

= (\$25 - \$24) × 1,000 = \$1,000 unfavorable

Labor Efficiency Variance:

= (Actual hours - Standard hours for actual production) × Standard rate

Since standard hours for actual production are 1,200 hours (standard for actual output),

Efficiency variance = $(1,000 - 1,200) \times \$24 = (-200) \times \$24 = \$4,800$ favorable

3. Overhead Allocation Using Activity-Based Costing (ABC)

Problem:

A company allocates overhead costs based on two activities: machine setup (\$10,000 over 500 setups) and quality inspection (\$5,000 over 1,000 inspections). A product requires 10 setups and 20 inspections. Determine the overhead allocated to this product.

Solution:

- Setup cost rate = $\$10,000 / 500 = \20 per setup
- Inspection cost rate = $\$5,000 / 1,000 = \5 per inspection

Overhead for the product:

- Setup cost = $10 \text{ setups} \times \$20 = \$200$
- Inspection cost = $20 \text{ inspections} \times \$5 = \$100$

Total overhead allocated = $\$200 + \$100 = \$300$

- Determine Break-Even Units:
 - Fixed costs / Contribution margin per unit = $\$200,000 / \$20 = 10,000$ units
- Calculate Break-Even Sales in Dollars:
 - Break-even units Selling price = $10,000 \$50 = \$500,000$
- Assess Impact of Increased Sales Volume:
 - Profit at 12,000 units:
 - (12,000 units \$20 contribution) - \$200,000 fixed costs = $\$240,000 - \$200,000 = \$40,000$ profit
